# PROPELLER BASICS

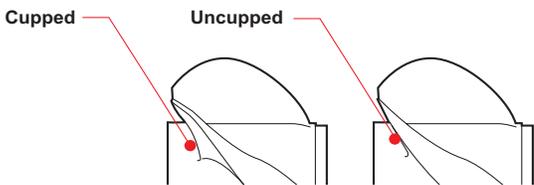

## Diameter

Diameter is two times the distance from the center of the hub to the tip of the blade. It also can be looked at as the distance across the circle that the propeller would make when rotating. It is the first number listed when describing a propeller.

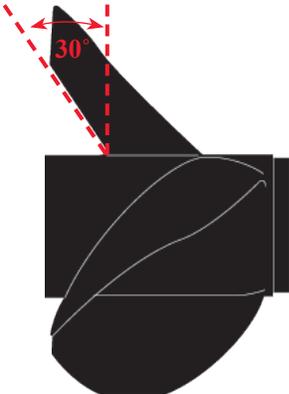

## Pitch

Pitch is defined as the theoretical forward movement of a propeller during one revolution - assuming there is no “slippage” between the propeller blade and the water. For most boats, there is slippage and therefore the distance advanced is less than the design pitch. The amount of slippage varies from boat to boat. Pitch is the second number listed in the propeller description.

## Cupping

Many of today’s propellers incorporate a cup at the trailing edge of the propeller blade. This curved lip on the propeller allows it to get a better bite on the water. This results in reduced ventilation, slippage, and allows for better hole shot in many cases. A cupped propeller also works very well where the motor can be trimmed so that the propeller is near the surface of the water. The cup will typically result in higher top end speed on one of these applications.

## Rake

Rake is the degree that the blades slant forward or backwards in relation to the hub. Rake can affect the flow of water through the propeller, and has implications with respect to boat performance.

*Aft Rake* helps to trim the bow of the boat upwards, which often results in less wetted surface area and therefore higher top end speed. Aft Rake propellers also typically provide better “bite” on ventilating-type applications.

*Forward, or Negative Rake*, helps hold the bow of the boat down. This is more common in workboat type applications.

## Ventilation

Ventilation is a situation where surface air or exhaust gases are drawn into the propeller blades. When this situation occurs, boat speed is lost and engine RPM climbs rapidly. This can result from excessively tight cornering, a motor that is mounted very high on the transom, or by over-trimming the engine.

## Cavitation

Cavitation, which is often confused with ventilation, is a phenomena of water vaporizing or “boiling” due to the extreme reduction of pressure on the back of the propeller blade. Many propellers partially cavitate during normal operation, but excessive cavitation can result in physical damage to the propeller’s blade surface due to the collapse of microscopic bubbles on the blade.

There may be numerous causes of cavitation such as incorrect matching of propeller style to application, incorrect pitch, physical damage to the blade edges, etc.

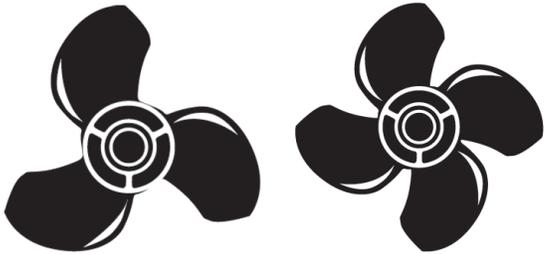

Be advised disturbances in the water flow forward of the propeller can result in blade damage, which appears to be blade cavitation, but is actually due to non-favorable water flow into the propeller.

# PROPELLER BASICS

Finding the right match between the propeller, engine type and boat size will optimize the following performance factors:

- Increased Top End Speed
- Faster Planing Speed (Hole Shot)
- Improved Low End Punch
- Load Carrying Capability

If you want to modify your boat's performance, consider the following before making your selection:

### 3-Blade Propeller vs. 4-Blade Propeller

We recommend 3-Blade propellers for recreational boats with 3, 4, and 6 cylinder outboards and I/O engines. These propellers provide good hole shot and top-speed performance.

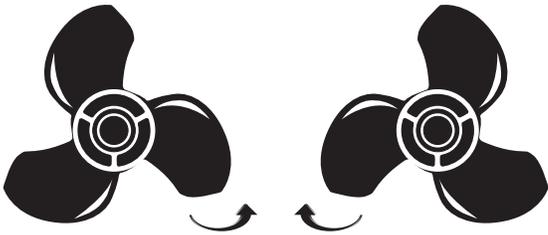

We recommend 4-Blade propellers for practical, all-around boat performance. These propellers enhance handling, hole shot, load-carrying performance, and fuel efficiency.

### Aluminum vs. Stainless Steel

Most pleasure boats are factory equipped with aluminum propellers. Aluminum propellers are relatively inexpensive, easy to repair, and under normal conditions can last for many years.

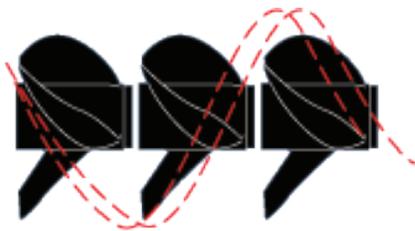

Stainless steel is more expensive, but much stronger and durable than aluminum. If you are looking for better performance than can be provided by your aluminum propeller, such as ultimate top speed or better acceleration, a stainless steel propeller may be required.

### Advantage of a Left Hand Propeller

Two propellers spinning in the same direction on twin engine boats will create steering torque. In other words, two right-hand propellers pull the stern hard to the right and the bow to the left.

Two opposite-direction (counter-rotating) propellers on twin engines eliminate this steering torque because the left-hand propeller balances out the right-hand propeller. This results in better straight-line tracking and helm control at high speed.

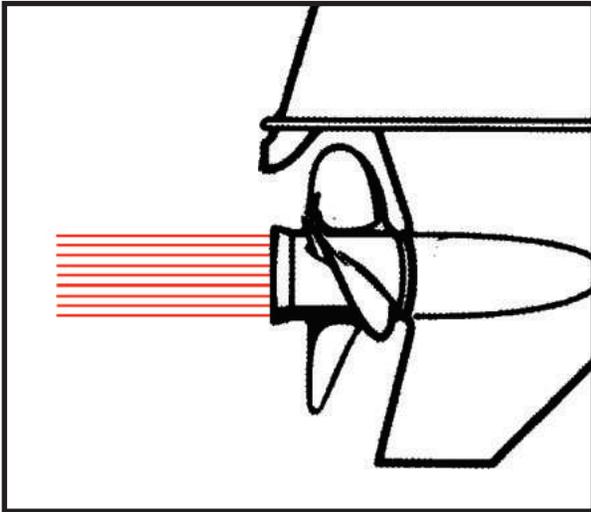

### Affect of Slip on Performance

Slip is the difference between actual and theoretical travel of the propeller blades through water. A properly matched propeller will actually move forward about 80 to 90 percent of the theoretical pitch.

Theoretical   
Actual 

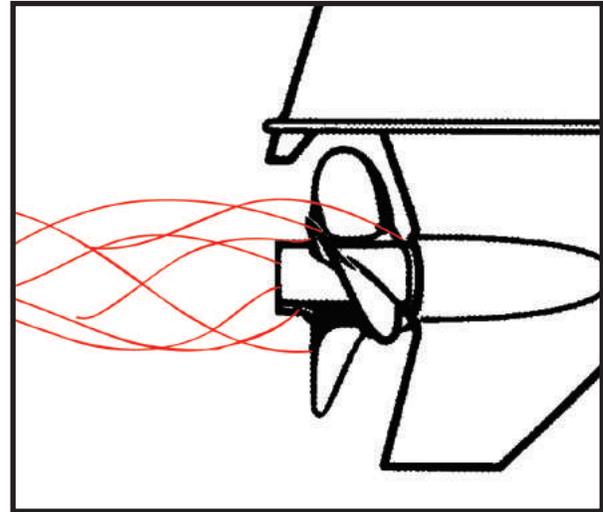

# PROPELLER BASICS

What is the difference between thru-hub exhaust, over-hub exhaust, and non thru-hub exhaust?

## THRU-HUB EXHAUST

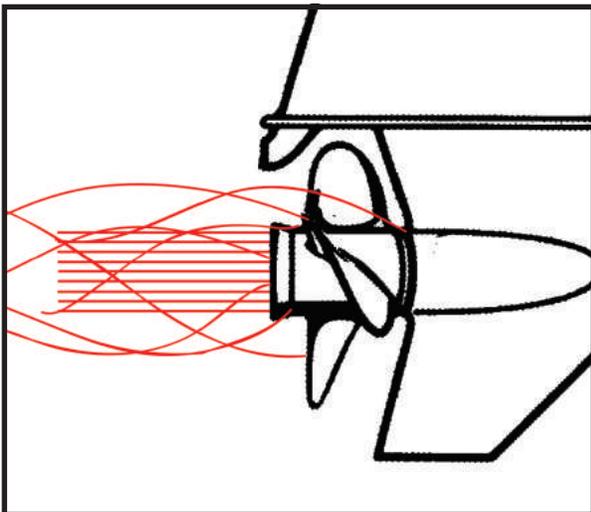

Thru-hub exhaust propellers consist of a round barrel to which the blades are attached. The exhaust passes through the barrel and out the back, without making contact with the propeller blades. This provides a good, clean water flow to the blades, usually resulting in good acceleration and hole shot.

## OVER-HUB EXHAUST

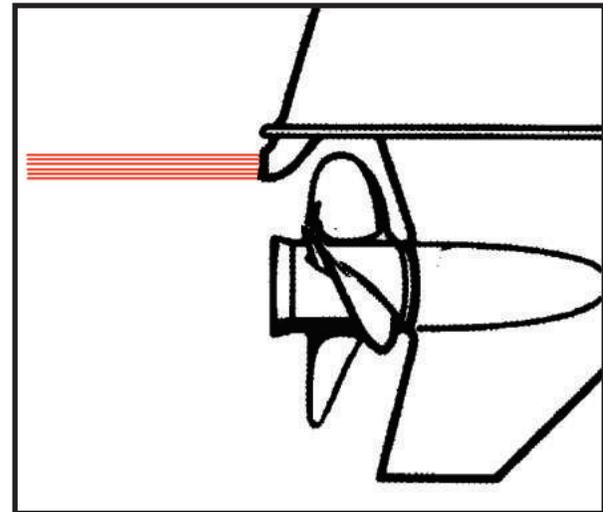

Over-hub exhaust propellers have the blades attached directly to the smaller tube that fits over the propeller shaft, eliminating the larger exhaust tube. These types of propellers are often used for attaining maximum top speeds. (On some boats, the hole shot can often suffer due to the extreme exhaust flooding that occurs around the propeller blades during acceleration.)

**THRU-HUB EXHAUST** and **OVER-HUB EXHAUST** propellers are used on boats where the exhaust passes out through the rear of the “torpedo” on the lower unit, around the propeller shaft. Most outboards utilize this type of exhaust.

## OVER/THRU-HUB EXHAUST

Over/Thru-hub exhaust propellers are a combination of thru-hub and over-hub exhaust propellers. This allows some exhaust to escape at lower RPM, providing a controlled amount of exhaust flooding. These types of propellers will allow the propeller to be slightly easier to turn during initial acceleration, allowing for better hole shot on some engine/boat combinations.

## NON THRU-HUB EXHAUST

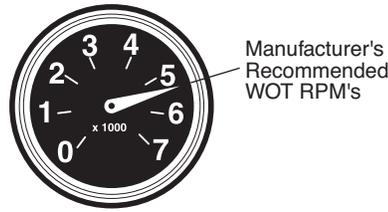

Non thru-hub exhaust propellers are used for inboards using shaft driven propellers, sterndrives using through hull exhaust, and on some outboards that don't route the exhaust through the lower unit torpedo.

# CHOOSING THE CORRECT PITCH

For safety and efficient performance, it is critical that your engine operates within the RPM range recommended by the manufacturer. Matching the right prop for the load is the most significant factor when choosing a new propeller.

## 1) Determine Manufacturer's Recommended RPM

Find the manufacturer's recommended RPM range in the owner's manual or ask your dealer. A reference chart showing common engine applications is shown on Pages A6-A7 of this catalog.

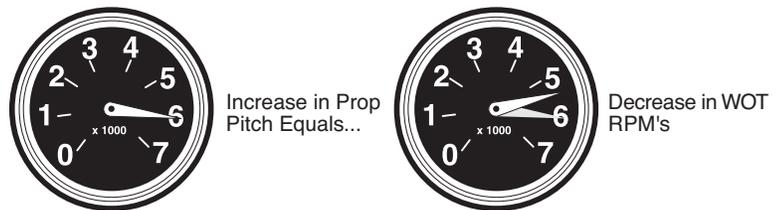

## 2) Test for Maximum RPM

Using the existing propeller or a new propeller, make test runs to determine the maximum RPM and boat speed. Vary the trim angle for optimum performance.

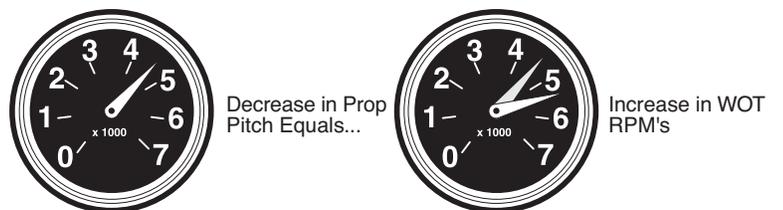

## 3a) If RPM are Higher Than Recommended

If the actual WOT RPM are *above* the recommended RPM range, install the next larger pitch propeller to *decrease* your WOT RPM. Re-test the WOT RPM.

## 3b) If RPM are Lower Than Recommended

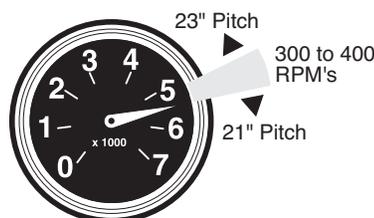

If the actual WOT RPM range is *below* the recommended range, install the next smaller pitch propeller to *increase* your WOT RPM. Re-test the WOT RPM.

*When you combine all these factors, you have the information you need to select the correct propeller for maximum performance, safety, and fuel efficiency.*

## Effect of Propeller Pitch on RPM

A pitch change can increase or decrease the RPM and bring RPM into the recommended range. A 2" increase in pitch (for example, from 21" to 23") typically results in a decrease of approximately 300-400 RPM.

# BASIC TROUBLESHOOTING

## • When installing an XHS / XHS II Hub System:

1. Confirm that the propeller is meant for use with your engine application (Figure 4).
2. Gearcase adapter rings are required for ALL VORTEX® “E” Series propellers. Gearcase adapter rings are supplied with every V4 VORTEX® and APOLLO® propeller, and may or may not be required (Figure 1 - 3).

Boat Description/Length	MICHIGAN VORTEX					MICHIGAN APOLLO					Drop-In Hub Use XHS II® Hub Kit <b>209</b> Refer to pages 41-42 for Details on Hub Kit Component.

Fig. 1 (Above) All Vortex “E” Series Propellers are shipped with a set of (3) gearcase adapter rings, and requires use of appropriate ring - indicated on the tabs.

Fig. 2 All Vortex and Apollo “B” Series (V4) Propellers are shipped with (1) gearcase adapter ring. Some engines require use of this gearcase adapter ring (Top Left), others do not (Bottom Left).

Fig. 3 Failure to install gearcase adapter ring leaves gap that causes excessive ventilation, poor performance.

3. Confirm the correct XHS® / XHS II® Hub Kit has been selected for your engine.
4. All OEM attachment hardware must be removed prior to installation of XHS® / XHS II® Hub Kits. The shaft taper must be visible (Figure 5). If the propeller shaft taper is not visible, the OEM forward thrust washer is likely still installed (Figure 6).
5. The forward thrust washer is tapered and will nest with the taper on the propeller shaft with little effort (Figure 7).
6. Each additional XHS® / XHS II® Hub Kit component is designed to be installed in a specific order. Refer to XHS® Installation Instructions (Form 990445) for correct order (Figure 8).
7. Verify all hardware components packaged with your XHS® / XHS II® Hub Kit have been used. Component part numbers can be found on Pg. 42 & 43.
8. Ensure your propeller nut is torqued to the manufacturer’s recommended value identified in your engine owner’s manual.

Fig. 4 Vortex “C” Series (3-3/8”) Propeller installed on a V4 (4-1/4”) gearcase. Results in poor performance and excessive ventilation. Vortex “B” Series (4-1/4”) Propeller should be used.

Fig. 5 Propeller shaft taper is visible, indicating OEM forward thrust washer has been removed. XHS Hub Kit forward thrust washer ready to be installed.

Fig. 6 OEM forward thrust washer was not removed. XHS Hub Kit and Michigan Wheel propeller will not fit properly.

Fig. 7 The forward thrust washer is tapered and will nest with the taper on the propeller shaft. When properly installed, the part number will be visible.

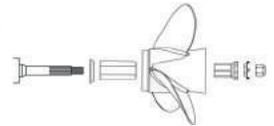

Fig. 8 The forward thrust washer MUST be installed first. Failure to install a forward thrust washer will cause gearcase damage and potential injury.

## • Other Common Installation Mistakes:

Over time, the forward thrust washer may appear as part of the propeller shaft. It is still necessary to remove the thrust washer when installing an XHS propeller.

The gearcase adapter ring will snap into place, and lay flush with the propeller. If there is a gap, it is not properly installed.

Aft drive adapter incorrectly installed. The propeller will fall off the propeller shaft if run with this incorrect installation.

The shaft taper takes forward thrust from the thrust washer. Without a forward thrust washer, the gearcase takes the forward thrust as the propeller will continue to move forward on the shaft, causing severe damage to the gearcase.

... Seriously?

## • When installing a rubber hub propeller:

1. Determine if this is a “drop-in hub” to Michigan Match® installation. If yes, follow the replacement instructions on Page. 24.
2. If this is an OEM to Michigan Match® installation, make sure all hardware components are available. Confirm that the forward thrust washer is not stuck in the old propeller.
3. Michigan Match® is an OEM-equivalent propeller. If the correct OEM propeller and attachment hardware was being used, the Michigan Match® equivalent will fit without issue.

## MERCURY® VERADO® RPM CHART

HP/Model	Years	WOT
----------	-------	-----

# 2017 MICHIGAN PROPELLERS

**MICHIGAN**  
**APOLLO**

## APOLLO® STANDARD 3-BLADE

Apollo® propellers are highly polished, ultimate performance, stainless steel wheels. Apollo® is designed to use Michigan Wheel's XHS® / XHS II® hub system, and is interchangeable with Mercury's Flo-Torq® II hub system.

- 30-70 HP (12" - 15" pitch; RH rotation)
- V4 Outboard (15" - 21" pitch; RH & LH rotation)
- V6/V8 OBSD (15" - 23" pitch; RH & LH rotation)

*Recommended Boat Applications: Inflatables, Aluminum Consoles, Bass Boats, Flats Boats, Sport Boat Singles, Sport Boat Duals*

## APOLLO® LARGE DIAMETER 3-BLADE

The Apollo® 3-Blade Large Diameter propeller is great for heavier applications that require increased blade area. Common to the entire Apollo® line, the Apollo® Large Diameter 3-Blade features CAD designed high performance blade geometry.

- V6/V8 OBSD (17" - 23" pitch; RH & LH rotation)

*Recommended Boat Applications: Bay Boats, Offshore Singles & Duals, Sport Boat Singles & Duals, Pontoons, Family Cruisers, Workboats, Houseboats*

## APOLLO® 4-BLADE

The Apollo® 4-Blade propeller is designed to improve hole shot on heavier loads. This propeller is ideal for pulling/towing in water sports. High performance blade geometry, high luster finish, utilization of the XHS® / XHS II® hub kit, and interchangeability with Mercury's Flo-Torq® II hub system makes the Apollo® 4-Blade the perfect propeller for a wide range of boats.

- V6/V8 OBSD (16" - 22" pitch; RH & LH rotation)

*Recommended Boat Applications: Aluminum Consoles, Bay Boats, Walleye Boats, Offshore Singles & Duals, Sportboat Singles & Duals, Skiboats*

**MICHIGAN**  
**BALLISTIC**

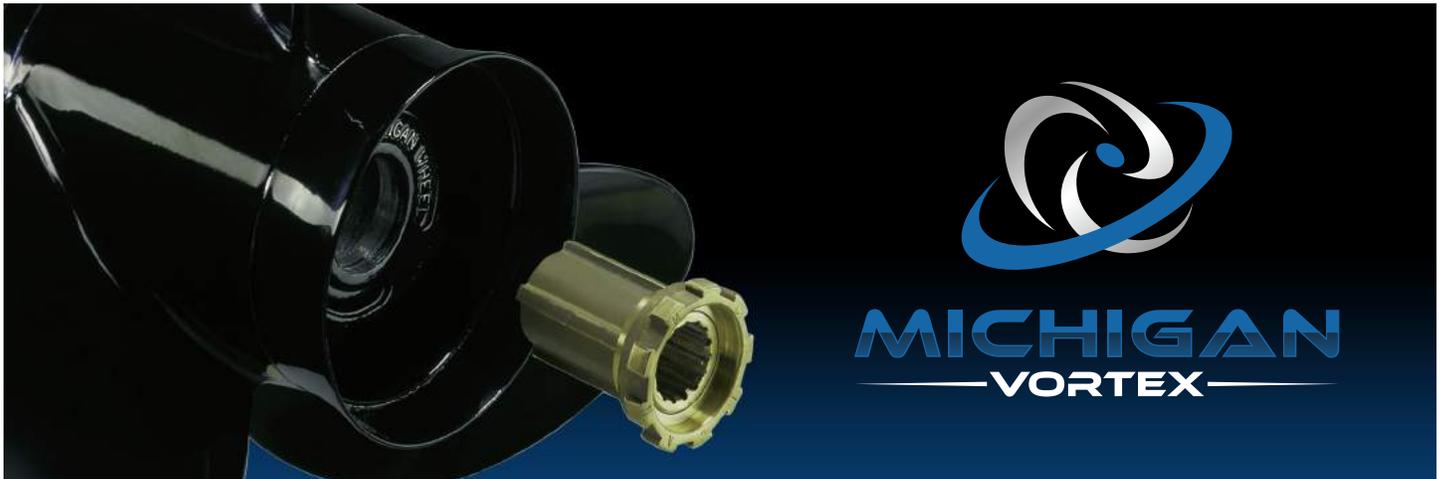

## BALLISTIC®

High performance stainless steel propellers with the proven Power Tip for peak efficiency, now utilizing Michigan Wheel's XHS® / XHS II® hub system. The blade tip and cup combine to improve bite and reduce power losses caused by cavitation. Highly cambered blade sections provide for higher speed and better bow lift.

- Tapered leading edges minimize drag
- Performance characteristics of racing style propellers
- Maintains optimum blade strength and thickness
- Ideal for the performance-minded boater
- Available in stainless steel, RH & LH rotation

*Recommended Boat Applications: Bass Boats, Bay Boats, Flats Boats, Pontoons, Sport Boat Single, Sport Boat Dual, Skiboats*

# 2017 MICHIGAN PROPELLERS

## VORTEX® 3-BLADE

High performance aluminum propeller utilizing the XHS® / XHS II® Xchangeable Hub System. Featuring high performance blade geometry, precision balanced blades, high gloss powder coat and interchangeability with the Mercury Flo-Torq® II system, the Vortex® XHS® / XHS II® is a great choice for a replacement or spare propeller for boaters.

- 20-70 HP (9" - 17" pitch; RH rotation)
- V4 Outboard (10" - 21" pitch; RH rotation)
- V6/V8 OBSD (15" - 23" pitch; RH rotation)

*Recommended Boat Applications: Inflatables, Aluminum Consoles, Walleye Boats, Offshore Singles, Pontoons, Skiboats, Family Cruisers*

## VORTEX® 4-BLADE

For quicker planing, improved handling and acceleration. Vortex® 4-Blade aluminum propellers are a great alternative to a comparable 3-Blade propeller, offering enhanced performance when towing water skiers, tubers, knee and wakeboarders.

- 20-70 HP (8"-10" pitch; RH rotation)
- V4 Outboard (11" - 19" pitch; RH rotation)
- V6/V8 OBSD (16", 18", 20" pitch; RH rotation)

*Recommended Boat Applications: Inflatables, Aluminum Consoles, Walleye Boats, Offshore Singles, Pontoons, Skiboats, Family Cruisers*

## MICHIGAN MATCH®

We pass the savings on to you in the form of a high quality, better-performing propeller that typically costs less than the engine manufacturer propeller you're replacing. Every Michigan Match® propeller features a NAVAL brass spindle with a rubber cushioned hub which absorbs impact and the stress caused by shifting gears. The rubber bushing is designed to spin free under significant impact, reducing the potential for lower unit damage. Great primary propeller, yet priced as a weekend-saver spare!

- Improved powder coating and beefier bushing
- Perfect replacement propeller
- Available in aluminum

*Recommended Boat Applications: Inflatables, Aluminum Consoles, Walleye Boats, Offshore Singles, Pontoons, Skiboats, Family Cruisers, Workboats, Houseboats*

# HOW TO USE APPLICATION CHART

- If the original equipment part number (OEM) is known and a size or style change is not desired, then refer to Part Number Cross Reference on Pages B2-B33 to locate the equivalent Michigan propeller.
- If an original part number is not known, the part number can not be found in the Part Number reference, or a propeller size or style change is desired, use the following procedure for selecting a propeller.

1. Locate the **BRAND** of outboard or sterndrive engine using the table of contents.
2. Locate the **HORSEPOWER/MODEL** and **YEAR** that corresponds with the engine brand.
3. Find the range of your **BOAT LENGTH**, and the boat use that best describes your vessel and usage.
4. Select the propeller **DIAMETER/PITCH** that best meets your vessel and usage. Refer to pages A2-A6 for information on choosing the right propeller.
5. Order the propeller using the **MICHIGAN PART NUMBER**. (If aluminum is desired, read across to the correct column for the part number. If stainless steel is desired, read across to the correct column for part number.)
6. If **VORTEX**®, **APOLLO**®, or **BALLISTIC**® propellers are selected, the **XHS**® / **XHS II**® **HUB KIT** indicated must be ordered.
7. Carefully read ALL notes for additional important attachment information. (If specific to a propeller, it will be noted next to the part number.)

*Unless otherwise noted: The XHS® / XHS II® hub kit is sold separately from the propeller. See pages 40-41 for XHS® / XHS II® hub kit and miscellaneous hardware information. Vortex® and Apollo® propellers fit existing Mercury Flo-Torq® II hubs. Check existing hub for wear or damage and replace if necessary with Michigan Wheel XHS® / XHS II® hub.*

**NOTE:** This is a "general" application guideline for determining the appropriate propeller size for your vessel. Performance characteristics may vary due to the many kinds of boats, hull styles, loads and style of boating.

## Replacing a Flo-Torq® Hub with Michigan Propellers

### Replacing a Flo-Torq® Drop In Hub Design with Michigan Propellers

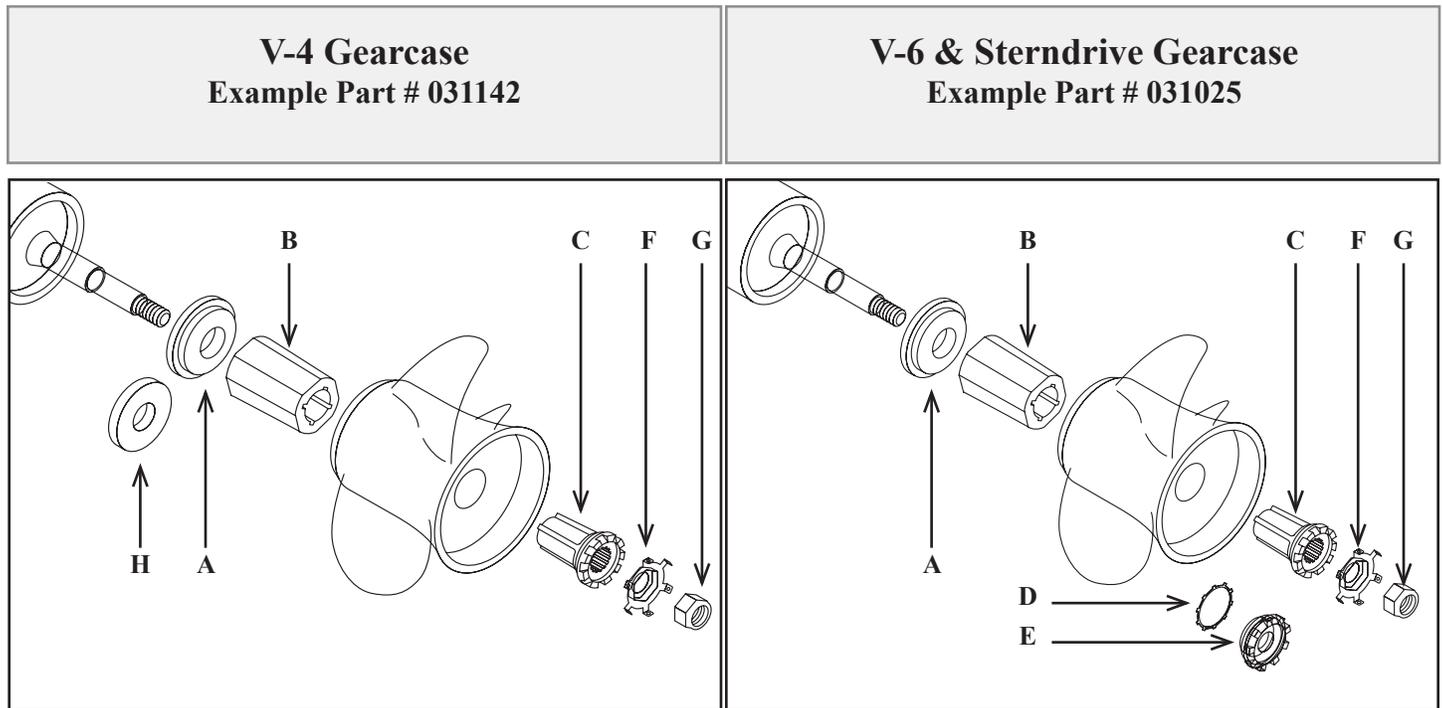

Propellers supplied from Mercury®, Mariner® and Force® since 1996 come with the Flo-Torq® II drop in hubs. When switching to Michigan Match® or Ballistic® propellers, change the attaching hardware set-up as follows.

When converting to a Michigan Propeller on a **V-4 gearcase**, eliminate B & C, replace A with H and use existing hardware F & G.

When converting to a Michigan Propeller on a **V-6 gearcase**, eliminate B & C and use A, D, E, F & G as attaching hardware (D & E replace C). Be sure to use high-performance trim tab 822777A1 for stainless steel installations.

Michigan Wheel offers the following attaching hardware kits for these installations:

- 990312 Includes D & E for the V-6 gearcase.
- 990332 Includes Forward Thrust Washer H for V-4 gearcase.
- 9661-1 Includes A, D, E, F & G for the V-6 gearcase.
- 9660-1 Includes H, F & G for the V-4 gearcase.

- A) **991204** Forward Thrust Washer
- B) **991301** Plastic Drive Sleeve
- C) **991205** Metal Sleeve Adapter
- D) **990340** Conductivity (Star) Washer

- E) **990348** Aft Castle Washer
- F) **990344** Locking Tab Washer
- G) **990346** Shaft Propeller Nut
- H) **990347** Forward Thrust Washer

## AMBUSH®

Michigan Wheel Marine, the leader in propeller manufacturing technology, presents Ambush® towboat propellers. These propellers are 100% CNC machined for the ultimate in accuracy and consistency. Michigan Wheel Marine developed the CNC machining process for propellers in the mid-1980's and revolutionized the way propellers became manufactured worldwide. Originally, the CNC machining technology was used to manufacture custom propellers for large mega-yachts where accuracy is critical and design geometry is complex. Now, that same technology is being used to provide the best towboat propeller on the market.

Part Number	Dia x Pitch	Rotation	Bore	Part Number	Dia x Pitch	Rotation	Bore	Part Number	Dia x Pitch	Rotation	Bore

635302	13" x 16"	RH	1-1/8"	635403	14" x 18"	LH	1-1/8"				

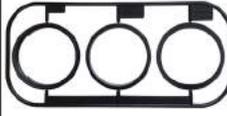

## DYNA-JET® CUPPED

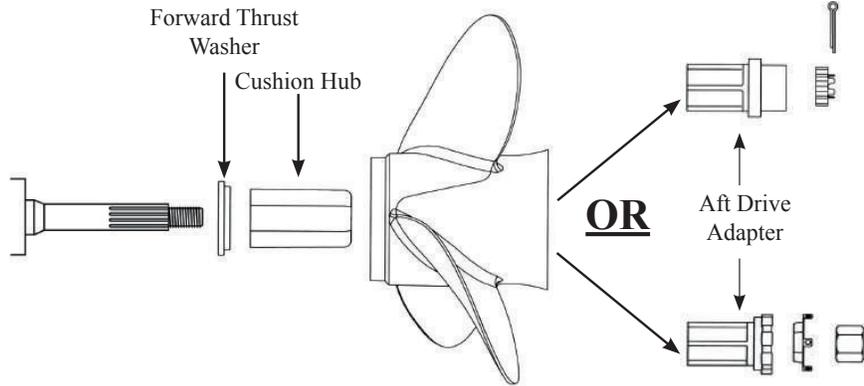

Michigan Wheel Marine's Federal Series ski boat propellers provide consistent response to your throttle commands. The 3-Blade Dyna-Jet Cupped Propellers are made of a NiBrAl alloy which provides extra strength, less flex, and greater durability. All are cupped to minimize the performance draining effects of cavitation.

## LIMITED WARRANTY

Michigan Wheel warrants to the original consumer purchaser and original motor fitted, that for a period of one year from the date of purchase, the body of the Michigan Match<sup>®</sup>, Vortex<sup>®</sup>, Apollo<sup>®</sup> or Ballistic<sup>®</sup> propeller will be free of any defect in material or workmanship that results in blade or hub fracture or failure under normal pleasure boat usage. Michigan Wheel also warrants to the original consumer purchaser, under the same parameters of use described above, that the propeller bushing, including XHS<sup>®</sup>/XHS II<sup>®</sup> hub kit components, will be free from any defect in material or workmanship for a period of one year from the date of purchase. Proof of purchase required for all warranty claims.

Some surface discoloration of propellers and hardware is unavoidable, and will not be covered by this warranty. This warranty also does not cover normal wear, accidental damage, modification, improper installation, improper maintenance, or other circumstances that are not the direct result of a defect in the material or workmanship of the propeller.

The sole obligation of Michigan Wheel under this warranty is to repair or replace the propeller, in the sole discretion of Michigan Wheel, and at its expense. In order to make a replacement claim, please contact the Michigan Wheel Customer Service Department, at (616) 452-6941, for a "Return Materials Authorization" number (RMA#), and shipping instructions. The RMA# is to be indicated along with our given address on the label, and the shipping carton should include your return shipping address, your phone number, and a copy of your original purchase receipt. The warranty will not cover any expense of propeller removal, shipping, or reinstallation of the propeller.

The above warranty is Michigan Wheel's sole warranty for the Michigan Match<sup>®</sup>, Vortex<sup>®</sup>, Apollo<sup>®</sup> or Ballistic<sup>®</sup> propellers as well as XHS<sup>®</sup>/XHS II<sup>®</sup> hub kits. Michigan Wheel expressly disclaims all other warranties, expressed or implied, including, without limitation, the warranties of merchantability and fitness for a particular purpose and excludes all liability for incidental or consequential damages, loss of use of the propeller, costs, and expenses.

Any actions arising out of this warranty and the sale of this product shall be governed by Michigan law and may only be brought, heard and decided in Kent County Circuit Court, in the State of Michigan, U.S.A., or in the United States District Court for the Western District of Michigan.

### **Need Your Propeller Repaired?**

Congratulations, you have chosen a top quality propeller. Should it become damaged during use, you want a qualified trained technician to repair it. Contact the **National Marine Propeller Association (NMPA)** at 954-880-3588 (F: 954-239-2600), or visit them on the web ([www.nmpa.net](http://www.nmpa.net)) for a certified propeller repair shop near you.

Warranty claims are to be addressed directly to **Michigan Wheel** per instructions on this warranty statement and not to the **NMPA**.
